QUICK GUIDE SMARTWATCH CONFIGURATION

1. Download App.

Download the app available in the Apple Store and Play Store: LeClock+ 

2. Register.

Register with an email and password.

3. Charge

Make sure the clock is charged.  If the display LED doesn't turn on when touched, the clock must be put in the base charger connected to the USB (make sure to remove the plastic protector from the watch).

4. Link Devices.

Once registered and with the app open, both devices must be linked.

Activate Bluetooth in the mobile phone and keep the watch close.

Touch for a few seconds the watch's screen in the date mode, to visualize the serial number.

In the app, go the inferior menu and select options  → Device Management → Configuration.

Select your serial number, the watch's screen will show this icon ?. Touch the screen to accept the vinculation.

When the vinculation is done the screen will show this icon .

It's only possible to vinculate the app with one watch, desvinculating the currently linked watch is required to link another one.

4. Smartwatch Functions.

The functions both the app and the watch have are:

Pulsations, Podometer, Burned Calories, Sleep Quality, SMS, E-mails, Calls, Configurable Alarms, Vibration Alarms.

Touch the watch's screen to see all the functions.

5. Notifications.

To edit the configuration of notifications, in the app go to Options  → Notifications and select those ones you want to have operational in the watch.
